

SOUTHERN PACKAGING SERVO DRIVEN FEED ROLL

No forward or backward adjustments
needed for registration eye position

CONVERSION SPECIFICATIONS

This conversion kit replaces the traditional line shaft driven feed roll assembly on Southern Packaging PowerPouch as well as most Bartelt® IM Packagers. The Servo Driven Feed Roll increases pouch width accuracy and reduces changeover times. With the Servo Driven Feed Roll, pouch width changes can be recipe driven or selected from the machine touchscreen.

Our professional, experienced service technicians are available to install your conversion kit to ensure that it will operate as intended. Proper training begins with the original installation. A service estimate can be provided upon request.

FEATURES

- Pouches are delivered to bag clamp in registration in a single index
- Eliminates manual adjustments to eccentric on mechanical feed roll drive assembly
- Eliminates clutch/brake rebuild of traditional assembly
- No forward or backward adjustments needed for registration eye position
